ABOUT ME

Java Developer focused on backend engineering and database schema design (PostgreSQL). While proficient in Spring Boot, I possess strong Core Java skills and understand how to build microservices without heavy frameworks (focus on non-breaking REST APIs). Privately, an IoT & Automotive enthusiast (BMW Telemetry), constantly exploring how software optimization impacts hardware performance. I am fully ready to relocate to Poznań or work in a hybrid model.

EXPERIENCE

 **HRTI**

08.2025 - now

Backend Java Developer | Freelance Team HRTI

Project: Developing backend modules for an ERP/CRM fleet management system.

- **Database Design:** I designed database schemas in PostgreSQL and optimized SQL queries to handle large amounts of data.
- **API Development:** I created RESTful APIs using Java 17 and Spring Boot. I focused on clean code and good architecture.
- **Business Logic:** I implemented complex business rules for vehicle tracking and reporting.
- **Collaboration:** I communicated directly with the client to understand their needs and turn them into technical tasks.
- **Skills:** Java 17, Spring Boot 3, PostgreSQL, Redis, ElasticSearch, MongoDB

PROJECTS

 **Live Demo**

ElectriShop – Microservices E-commerce System | R&D Project

- **Architecture:** I designed a distributed system with 8 microservices using Spring Cloud and Apache Kafka
- **REST API:** I built REST APIs focusing on non-breaking changes (backward compatibility) to ensure system
- **Transactions:** I handled distributed transactions and ensured data consistency between services
- **DevOps:** I set up CI/CD pipelines (GitHub Actions) and used Docker for containerization
- **Skills:** Java 21, Spring Boot 3, Spring Cloud, PostgreSQL, MongoDB, gRPC, Redis, Docker, React

SKILLS

Languages: Java 17+ (Streams, OOP), Python (Basic), React (Basic), JavaScript (Basic), HTML/CSS

Framework i Technologie: Spring Boot 3, Spring Cloud, gRPC, Spring Security, Hibernate (JPA)

Architecture: Microservices, DDD, Apache Kafka, REST API, SOAP, XML, Maven

Tool & DevOps: Git, Docker, AWS (Basic concepts)

Databases: PostgreSQL, Redis, MongoDB

EDUCATION

2023 – Present (Part-time student)

WSB Merito University in Chorzow Computer Science (Bachelor's degree)

Languages

Polish: Native

Russian C1 (Advanced)

English: B1 (Technical proficiency)

Hobby

IoT & Embedded Systems (Hardware-Software Integration)

- **BMW Telemetry System:** Built a real-time diagnostic tool (OBDII) reading engine parameters (turbo, temp) and visualizing data.
- **Time-Tracking Cube:** Created a physical IoT device (ESP32/C++) that sends work-time data wirelessly to a Java backend.
